## EXPERIENCE

---

### WHITE ELEPHANT AGENCY

Toronto, ON

Software Developer Intern

2026

- Developed backend functionality for a production-ready e-commerce web application using TypeScript, Supabase, and Stripe, implementing database connectivity, payment processing workflows, automated email confirmations, PDF order generation, and CMS integration across 5+ core application features.
- Collaborated within a small Agile development team to plan application architecture, research and integrate third-party services, troubleshoot frontend/backend issues, adapt to evolving client requirements, and deploy iterative application updates through weekly testing and demo cycles.

## EDUCATION

---

### DURHAM COLLEGE

OSHAWA, ON

*Ontario College Advanced Diploma - Computer Programming and Analysis*

2023 - 2026 (Expected)

- Relevant Courses: Web Development Frameworks, Object-Oriented Programming 3, Mobile Development
- Cumulative GPA: 4.70 / 5.0

### UNIVERSITY OF TORONTO

TORONTO, ON

*Honours Bachelor of Science - Psychology and Media Studies*

2017 - 2021

- Graduated with High Distinction
- Cumulative GPA: 3.83 / 4.0

## TECHNICAL SKILLS

---

- Languages: C#, Java, JavaScript, TypeScript, SQL, Dart
- Frameworks: React, Next.js, Spring Boot, Flutter, .NET
- Tools: Git, GitHub, PostgreSQL, Supabase, Contentful, Stripe, NocoDB
- Methodologies: Agile, RESTful APIs, JWT Authentication, RBAC, SSG/SSR/CSR

## PROJECTS

---

### BAKERY OPERATIONS MANAGEMENT SYSTEM

- Architected a full-stack e-commerce and bakery management application using Next.js, Supabase, and JavaScript, enabling customers to browse and purchase pies and preserves online while streamlining inventory tracking, sales processing, and order management across 20+ normalized relational database tables.
- Implemented a role-based admin dashboard featuring detailed business analytics, inventory monitoring, and secure RBAC authentication with multiple login permission levels, enabling staff to create, update, view, and manage products while improving operational efficiency through automated reporting and centralized data management.

### ATHLETEGUARD

- Developed AthleteGuard, a full-stack athlete workload monitoring system using Java, Spring Boot, PostgreSQL, Thymeleaf, and Spring Security, implementing 5 relational database tables, role-based authentication, and secure athlete/coach access controls.
- Engineered workload analytics and injury-risk monitoring features by implementing Acute:Chronic Workload Ratio (ACWR) calculations, automated risk classification logic, and validated training session workflows, improving data reliability through backend validation and date-based workload filtering.
